

Job Title:	Systems Engineer (SE)
Reports To:	Service Delivery Manager (SDM)
FLSA Status:	Exempt
Prepared Date:	Thursday, August 27, 2008
Supervisory Role:	No
Estimated Salary Range:	\$50,000 – \$75,000 / year + bonus

SUMMARY

Exigent Technologies provides IT services to a wide range of small to medium-sized organizations that outsource their IT needs to us. The position is challenging and is not entry-level. Candidates chosen for this position will be exposed to a variety of local and wide area network technologies. Candidates should have strong leadership skills and a willingness and ability to work through tough situations and solve challenging problems. Extraordinary written, verbal and interpersonal skills are a must. Candidates should be ready and willing to commit to continuous education, certification and self-improvement.

The (SE) position entails working remotely from our office in Mount Arlington, NJ and traveling with his/her reliable vehicle to clients in NJ and Manhattan. Generally, Exigent's clients are located within a 35 mile radius of Morristown, New Jersey. Overnight travel is extremely rare but could happen in an isolated case, extremely infrequently (less than once per year on average).

ESSENTIAL DUTIES & RESPONSIBILITIES

The (SE) installs implements and supports PCs, networks, servers, firewalls, routers and desktop software for a variety of diverse small to medium-sized organizations. The candidate should expect and not be opposed to performing a wide variety of IT support ranging from simple desktop and peripheral support to complex server and network issues, as dictated by client request and company workload.

ESSENTIAL SKILLS

- Ability to troubleshoot basic Microsoft Exchange Server 200x issues
- Two or more years of supporting desktops and servers in a Microsoft Active Directory environment
- Strong Active Directory knowledge and troubleshooting ability
- Strong TCP/IP networking knowledge and troubleshooting ability in a LAN/WAN environment
- Strong RAID, Server hardware, backup software skills
- Strong understanding of DNS at both the LAN and Internet levels
- Backup software and methods of backing up servers. Veritas BackupExec
- Understanding and hands on experience with Firewall hardware or software, NAT, VPN

MINIMUM REQUIREMENTS

High School Diploma or equivalent

- **Certifications:**
 - Microsoft Certified Systems Administrator (MCSA) or equivalent technical ability and experience
 - CompTIA Network+ or equivalent technical ability and experience

(All candidates will undergo a technical skills assessment test upon interview)
